

We have a project!

Our first project in the Fish class is “How Things Work!” We have observed that the students enjoy taking things apart and putting them back together. We think this will be a wonderful learning experience, and very engaging for the children! We are excited to begin discovering how things work by taking things apart and looking inside!

The children are intrigued with the hand-crank pencil sharpener in the classroom. We will explore other tools we find in the classroom, Studio, and playground (e.g. stapler, slide)

If you have any items that lend themselves to this investigation, please send them in!

Dramatic Play

The children love our campground! They have been roasting marshmallows and hot dogs over the “campfire,” sleeping in the tent, and packing picnic lunches!

Author Study

Our author focus is on Anna Dewdney, author of the well-loved Llama Llama books. Written in rhymes, each book starts with a simple life problem and proceeds to solve it, with lessons learned along the way.

Science

Using our fine motor skills, the children are hammering golf tees into a pumpkin!

Math

We have started patterning, beginning with the simple AB AB pattern. The children will get lots of practice with this in several areas of the classroom.
